This report shows the percent of energy savings for this period compared to same period in the base year for each individual building and District-wide.

MMBtu (Million British Thermal Units) is a converted measurement of total energy use as it relates to both electricity, natural gas, and fuel oil. A negative percentage indicates a savings/a reduction in energy use and a positive percentage indicates increased energy use when compared to the base year. Cost avoided is an estimated calculation of dollars that would have been spent had energy not been saved. The goal of the Schools for Energy Efficiency program is to achieve an annual 10 percent reduction in energy use (MMBtu) District-wide. ©2002, 2009 Energy Efficiency Programs, Inc.
